

## ABSTRACT

Disclosed is an interlabial pad which can be worn by closely fitted between the labia with high adhesion to the inner thigh of a user, and can be used irrespective to the depth of the labia of the user having a configuration by which a sure and sanitary wearing can be achieved. A sheet body including an absorbent body is provided to have a dual structure of a main sheet body (2) and a sub-sheet body (6). A long convex area (3) formed by bending the main sheet body (2) is provided on the body side surface of the main sheet body (2) so as to be inserted in between the labia. Furthermore, the interlabial pad is formed to be in a state capable of double changeover by providing two finger insertion openings for holding the interlabial pad on a fingertip when wearing the interlabial pad (1). A first finger insertion opening (19A) is formed between the main sheet body (2) and the sub-sheet body (6) and a second finger insertion opening (19B) is formed between the sub-sheet body (6) and a mini sheet piece (14).
